Ayesh Nawawickrama

Forward Deployed Engineer · Full-stack, client-facing

Sri Lanka (UTC+5:30), open to remote work · +94 77 938 9533 · nawawickrama@gmail.com · linkedin.com/in/nawawickrama

SUMMARY

I sit between the customer and the code. I've spent years working straight with clients: Swedish product teams at ToBeShore and 80+ freelance clients across four countries. At Coredile I turned how Sri Lankan shops and restaurants run into a working point of sale. I turn a loose business need into working software, integrate it with what the customer already runs, and ship it to production myself. Full-stack in Laravel, React, Angular and Flutter, writing software since 2014 and in professional roles for six years.

SKILLS

Customers	Requirements with clients, scoping, demos, rollout, support, and social campaigns after launch
Integration	REST APIs, Microsoft Teams, payments (Stripe, PayPal, PayHere, Payoneer), WooCommerce, offline sync, .NET Core services
Stack	PHP, Laravel, TypeScript, React, Angular, Flutter, Electron, PostgreSQL, MySQL, Redis
Shipping	Docker, Coolify, Linux, CI/CD, Pest, Playwright, Claude Code, custom Claude skills, n8n

EXPERIENCE

Co-founder & Product Engineer · Coredile, Sri Lanka — Jul 2026 – Present

Coredile POS: an offline-first point of sale and business platform for shops, bakeries and restaurants.

- Designed and built the product end to end: a Laravel API, React apps for the till, back office and admin panel, and a Windows till in Electron.
- Turned how Sri Lankan shops and restaurants run into the product's rules: who can refund, what prints for the kitchen, what the accountant needs at month end.
- Made the till keep selling with no internet. Every sale is saved locally and synced when the connection returns; a simulator runs twenty tills against the server with the connection cut to prove it.
- Multi-tenant on PostgreSQL, with each business's data kept apart by row-level security. Money and stock are exact decimals, never floating point.
- Deployed with Docker on Coolify; tested with Pest and Playwright. Built working closely with AI coding tools (Claude Code).

Software Engineer Level II · ToBeShore (Pvt) Ltd, Sri Lanka · Swedish-owned — Jan 2026 – Present

- Work directly with Swedish clients and product managers, turning their requirements into releases.
- DocRepeat (field service management): build the Angular web app and the Flutter app technicians use in the field, on .NET Core services, and help decide what gets built next.
- DayzOff (leave management): built core Angular features and the Microsoft Teams integration.
- Run DocRepeat's social media campaigns, so I see how each feature lands with customers.
- Built Claude skills and CI/CD pipelines the team uses to ship faster.

Web Engineer · ToBeShore (Pvt) Ltd Jun 2023 – Dec 2025

- Built and looked after client websites in WordPress (Elementor Pro, Divi), with WAF security and WP Rocket for speed.
- Designed interfaces in Figma and Adobe XD, then built them in Flutter, React and Angular.
- Started on DocRepeat: Angular front ends on .NET Core services, and the Flutter app for field technicians.

Freelance Web Developer · Fiverr Sep 2014 – Present

- 80+ projects for clients in Sweden, the UK, the US and Canada, scoped and delivered directly with each client. 5.0 rating, many returning clients.

Web Engineer (Remote) · IAS College, Germany May 2021 – Jun 2023

- Built WooCommerce stores with Stripe, PayPal, PayHere and Payoneer payments, and custom WordPress plugins.
- Built PHP and Laravel back ends with MySQL and SQLite, plus API integrations.
- Responsive front ends with Bootstrap, jQuery and DataTables; on-page SEO with Yoast and Rank Math.

Associate Web Developer (Part-time) · Cellmart LK (Pvt) Ltd, Sri Lanka Aug 2019 – Jan 2020

- Built the company website and an internal inventory system in PHP and MySQL, with role-based access, stock dashboards and REST APIs that synced product data.

SELECTED WORK

Coredile POS · Co-founder, lead engineer Sri Lanka

Offline-first till and back office for shops, bakeries and restaurants, sold in editions per type of business. Laravel, React, Electron, PostgreSQL, Redis, Docker.

DocRepeat · ToBeShore Sweden

Field service management: an Angular dashboard for the office and a Flutter app for technicians in the field, on .NET Core services.

DayzOff · ToBeShore Sweden

Leave management that works with Microsoft Teams. Angular, Microsoft Teams APIs.

Let's Ride · Co-founder letsride.lk

A marketplace where tourists post a trip around Sri Lanka and local drivers bid for it. Laravel API, React web app and admin console, Flutter app, real-time chat and bids with Laravel Echo.
