PRODUCT GUIDE

For bakeries

Bake, sell, and know what every loaf costs.

Coredile POS knows your recipes, plans tomorrow's bake, records what came out of the oven and what was lost, and sells it all at a quick counter that keeps going when the internet drops.

Rs 71.30
what one loaf costs, worked out for you

40%
food cost or more is marked

3 days
of selling with no internet

7 a.m.
email with yesterday's sales

Six reasons bakeries choose Coredile

Know what every item costs

Each recipe is priced at what you really paid for the flour, sugar and butter.

Plan the bake the night before

A printed sheet of what to weigh out, and a warning when flour is short.

See what was lost

Burnt and broken bread counted in loaves and in rupees, every day.

Your recipes stay yours

Bakers record the bake without opening your recipes.

One bakery, many shops

Send trays to each shop. Each shop receives what actually came.

No internet? Keep selling

The morning rush carries on, and every bill goes up later by itself.

RECIPES

Know what every loaf costs you

Recipes and production come with the Bakery plan. Tell Coredile what goes into a batch once, and it prices every loaf, bun and cake at what you really paid for the ingredients.

A batch of 20 sandwich breads: Rs 1,426 of ingredients, Rs 71.30 a loaf, food cost 38.2%.

Recipes in any unit

Kilos, grams, millilitres or pieces. Coredile converts them for you.

Cost at what you paid

Each ingredient at its average cost in that branch, so the price of flour today is the one used.

How long it keeps

Say how many days an item keeps, and each batch gets its use-by day.

Recipes kept in versions

Change a recipe from a day, and earlier bakes keep the cost they had.

How much a batch makes

Makes 20 loaves, 24 buns or one cake. Ingredients are scaled from it for any amount.

Food cost marked

What one costs against its price before VAT. Anything at 40% or more is marked on the list.

Doughs and fillings

A dough or filling made in bulk can be an ingredient of other recipes.

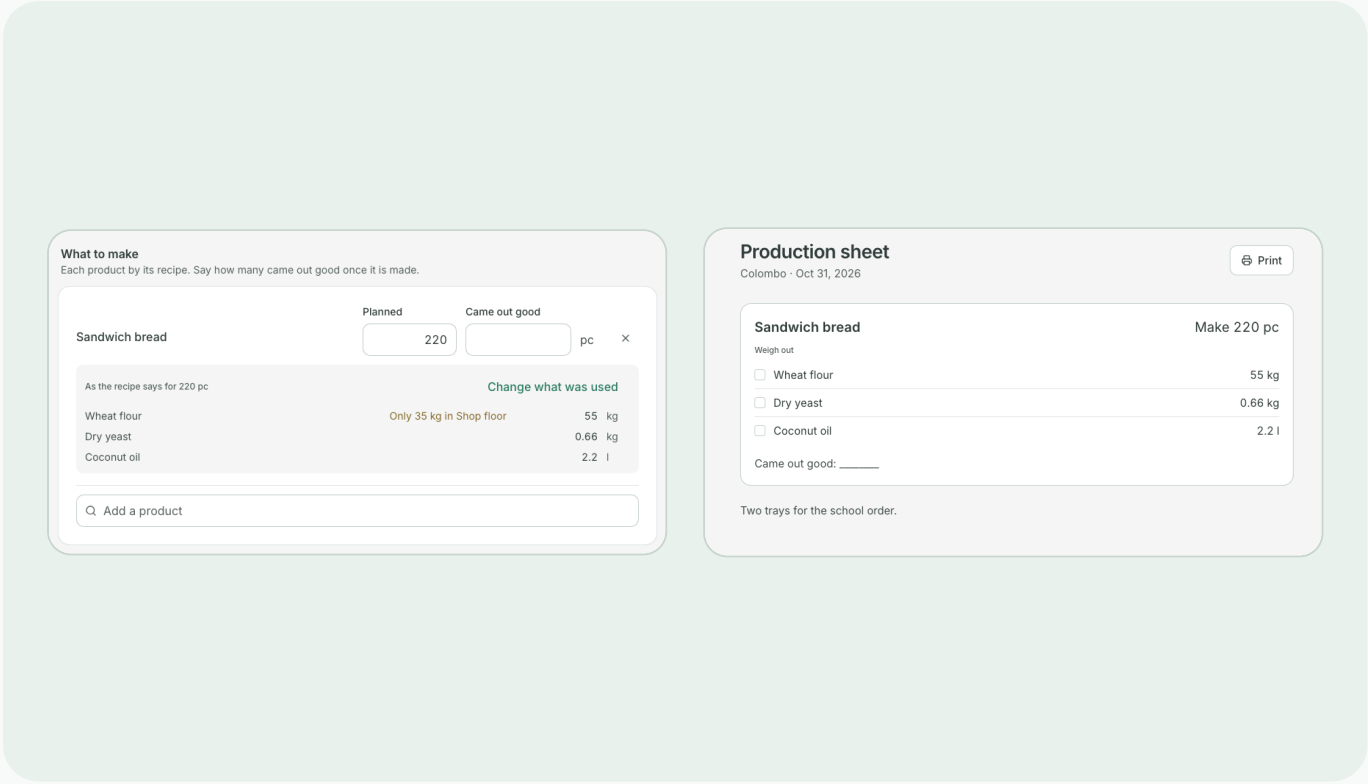

☆ WHAT IT MEANS FOR YOU

You see which items really make money, and which need a new price.

THE NIGHT BEFORE

Plan tomorrow's bake tonight

The manager plans the bake from your recipes in the back office: which products, and how many of each.

The plan with its flour warning, and the sheet the bakers work from.

- **Plan from recipes**
  220 sandwich breads and 96 tea buns: Coredile works out every ingredient.
- **The production sheet**
  Prints what to weigh out for each product, with boxes to tick and a line for what came out good.
- **The cost of the bake**
  What all the ingredients will cost, before you start.
- **A warning when stock is short**
  If there isn't enough flour in stock, the plan says so straight away.
- **Notes on the plan**
  Such as two extra trays for a school order.

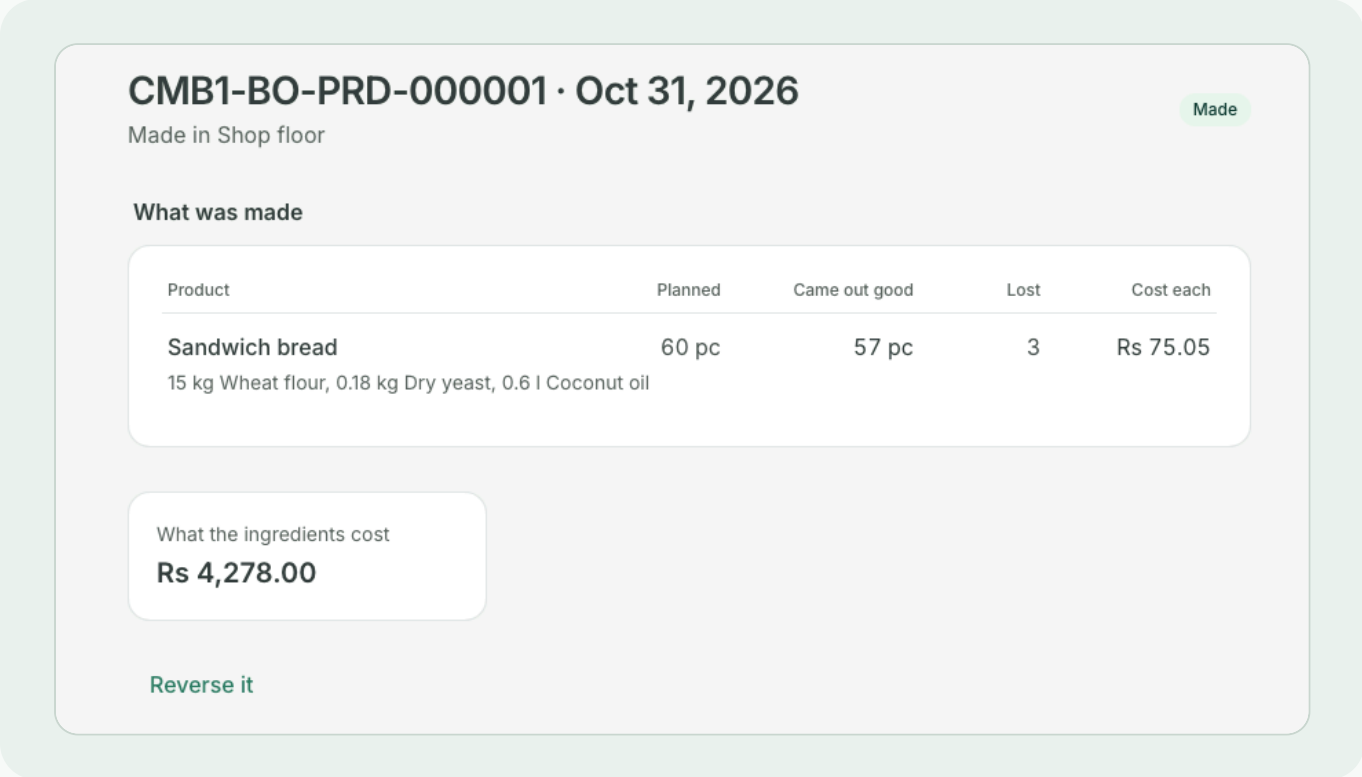

☆ WHAT IT MEANS FOR YOU

Nobody finds out at 4 in the morning that the flour has run out.

IN THE MORNING

Record what came out good

When the bake is done, the baker says how many of each came out good. Coredile does the rest in one step.

The morning's bake, posted: what came out good, what was lost, and the cost of each.

- **Good and lost**
  Planned 60, 57 came out good, 3 lost. Each product on its own line.
- **The true cost of one**
  The good loaves carry the whole cost: Rs 75.05 each on a day 3 were lost, instead of Rs 71.30.
- **A mistake reversed**
  A bake entered wrong is reversed exactly and entered again.
- **Ingredients out, bread in**
  The flour, yeast and oil leave the stock, and the bread arrives on the shelf ready to sell.
- **What was really used**
  If more or less of an ingredient went in, record what was really used.
- **The production report**
  Planned, good and lost by product and day, with what one good item cost.

☆ WHAT IT MEANS FOR YOU

Losses in the oven stop being invisible. You see them every day, in rupees.

YOUR RECIPES

Your recipes stay yours

A bakery's recipes are its secret. Coredile lets bakers do their work without opening the recipe book.

Bakers can't open recipes

Someone who records the bake sees what can be made, not how it is made.

Only the people you choose change them

Changing a recipe is a permission you give.

A ready-made Baker role

Record the bake, see stock and sell at a till. Nothing more unless you allow it.

Every change kept

A change makes a new version from that day, and past bakes keep their cost.

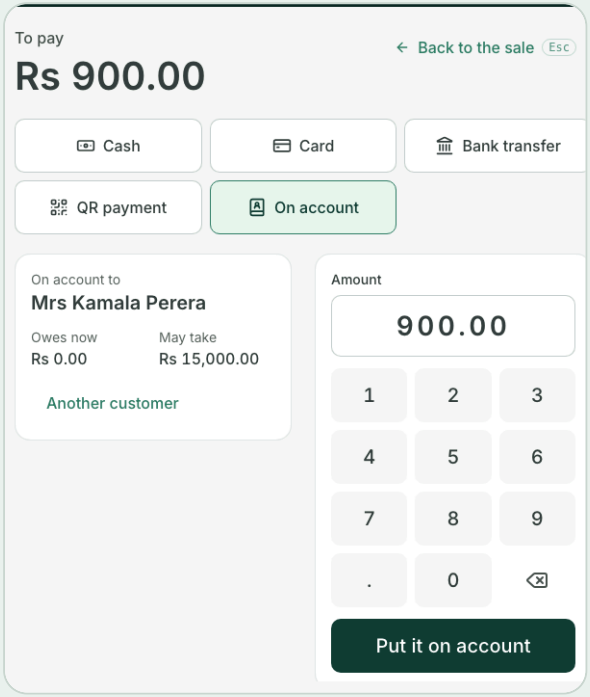

☆ WHAT IT MEANS FOR YOU

Family recipes stay in the family, even with new staff in the bakery.

AT THE COUNTER

Quick at the counter, morning rush included

The till is built for queues: big buttons, clear prices, and the total always in view. A new cashier learns it in one shift.

The pay screen: five ways to pay, including on account.

- **Quick buttons with pictures**
  Every bread, bun and cake one tap away, in eight colours with a small picture.
- **Every way of paying**
  Cash, card, bank transfer or QR, with the change worked out.
- **Prices for later**
  Set a new price from a day and time. Every till switches by itself.
- **Tax invoices**
  For a business customer who asks, in one tap.
- **Barcodes too**
  Packed drinks and groceries scan as in any shop.
- **Hold a bill**
  Put a customer's bill aside and serve the next one.
- **Customers on account**
  Hotels, offices and schools that pay at month end, each with a credit limit.

☆ WHAT IT MEANS FOR YOU

Short queues in the morning, and the right price every time.

WHEN THE INTERNET DROPS

No internet? Keep selling.

Each till keeps its own copy of your products, prices, offers and staff, so it does not need the internet to sell. Power cuts and internet problems stop being a crisis.

KEEPS WORKING WITHOUT INTERNET

- ✓ Billing
- ✓ Printing bills
- ✓ Cash and card
- ✓ Returns
- ✓ Manager PINs
- ✓ Offers
- ✓ Cash-up

When the internet comes back, every bill goes up in the right order by itself.

- ✓ **Up to 3 days without internet**
  The till sells, prints bills and takes returns of its own receipts as normal.
- ✓ **Logins and PINs work offline**
  Cashiers log in and managers approve with their PINs, checked on the till itself.
- ✓ **Prices change on time**
  A new price set for a day and time switches on every till by its own clock, even offline.
- ✓ **Nothing is lost**
  Every bill waits in order on the till and goes up by itself when the internet is back, never twice.
- ✓ **Credit limits known offline**
  The till knows what each account customer may still take.
- ✓ **You can see every till**
  The back office shows each till: online or not, when it was last heard from, and what it still has to send.

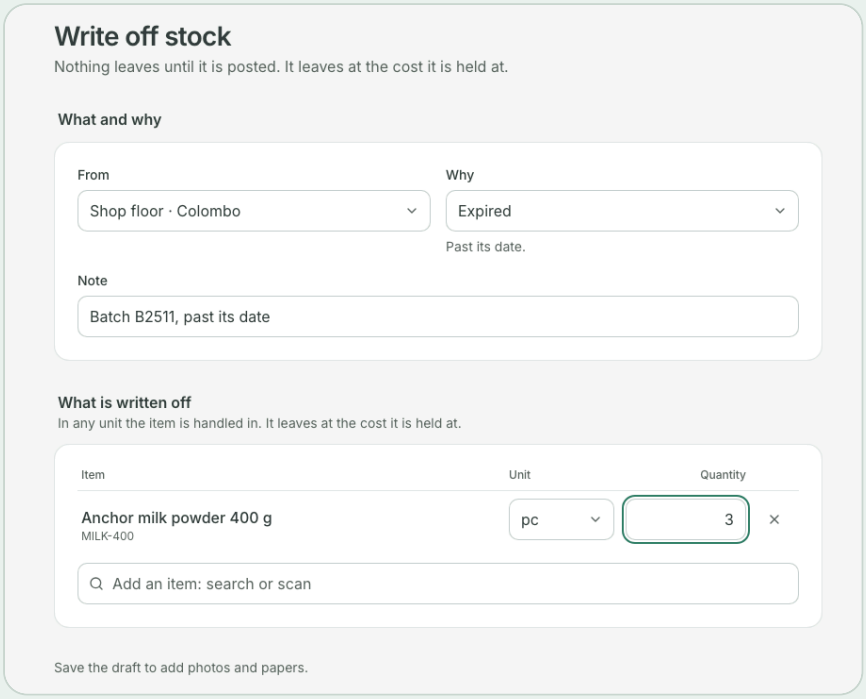

☆ WHAT IT MEANS FOR YOU

Your customers never notice the internet went down. You keep selling, and nothing needs fixing afterwards.

AT CLOSING

Know what's left at closing

Bread doesn't keep. Coredile helps you sell it in time and records what didn't sell, so the loss is on paper instead of in the bin.

A write-off with its reason and note.

- **Write off what didn't sell**
  With a reason: expired, spoiled or damaged, at what it cost you.
- **Oldest first**
  Sales take the batch that expires first, by themselves.
- **Evening deals**
  Lower prices after six, set once and applied by every till (Offers and Loyalty).
- **A photo or a note**
  Kept with the write-off, if you want one.
- **Expiring soon**
  A list of what has expired and what will soon, ready to write off.
- **A blind cash-up**
  The drawer is counted note by note; a manager sees if it's short or over.

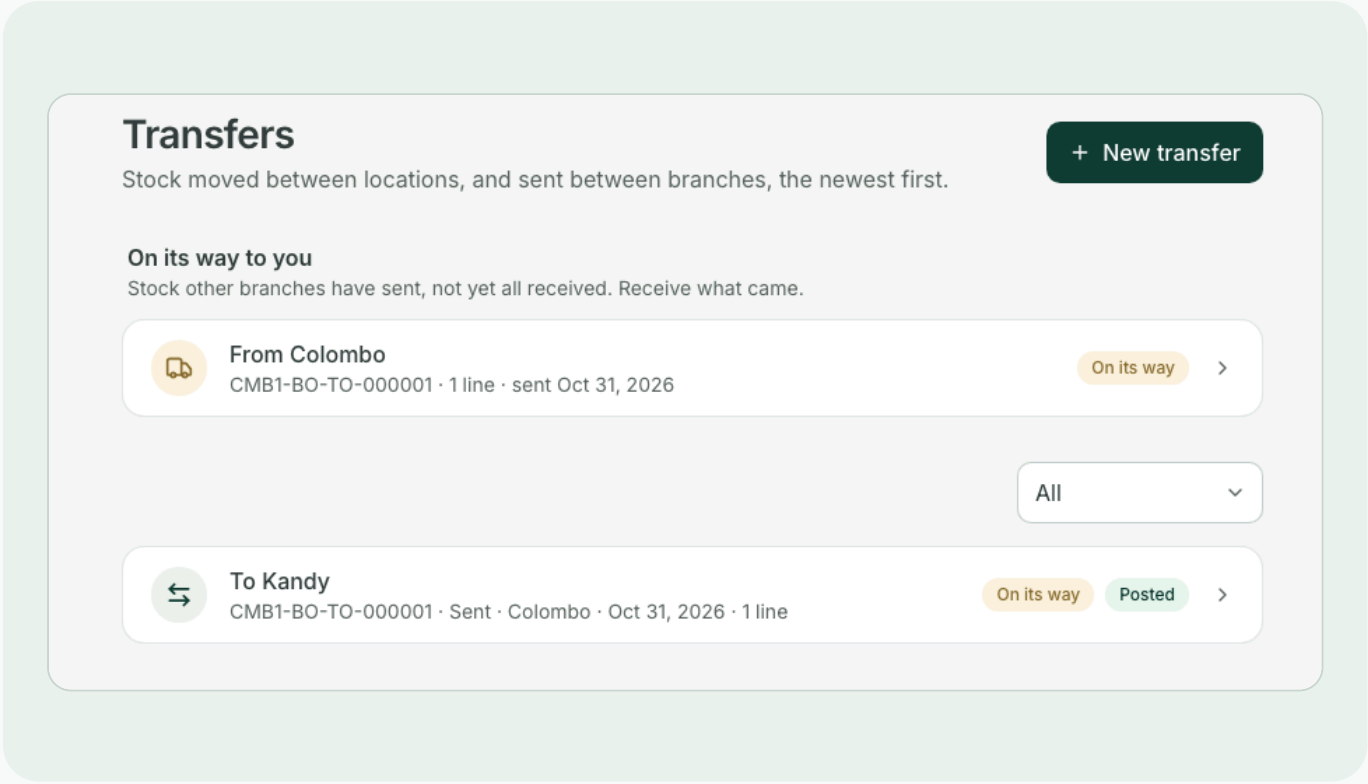

☆ WHAT IT MEANS FOR YOU

You know exactly what was wasted each week, and can bake closer to what sells.

MORE THAN ONE SHOP

One bakery, many shops

Many bakeries bake in one place and sell in several. Coredile follows every tray from the oven to the shop.

Transfers between branches, on their way and received.

- **Send to each shop**
  The bakery sends what each shop needs, in any unit.
- **Receive what really came**
  The shop receives what actually arrived. What never came stays on its way, for the bakery to see.
- **Shops compared**
  Sales, margin, losses and stock, side by side.
- **On its way**
  Both sides see what is on its way until it arrives.
- **Each shop on its own**
  Every shop has its own stock, sales and prices if you want them.

☆ WHAT IT MEANS FOR YOU

No more arguments about how many trays left the bakery and how many arrived.

CONTROL AND SECURITY

Nothing happens without you knowing

Coredile is built so the owner always knows who did what, even on the days you are not there.

A manager's PIN where it matters

Big discounts and refunds need a manager's PIN at the till, even with the internet down.

Approvals by value

Refunds, write-offs, stock corrections, supplier payments and orders over an amount you set wait for the right person.

Every action recorded

Every refund, price change and drawer opening is saved with who did it and when.

A blind cash-up

At closing the cashier counts the drawer note by note without seeing what it should hold. A manager sees how the count compares.

Each person sees their own job

Cashiers, managers, accountants and owners each get only the screens and permissions their work needs.

Tills that are watched

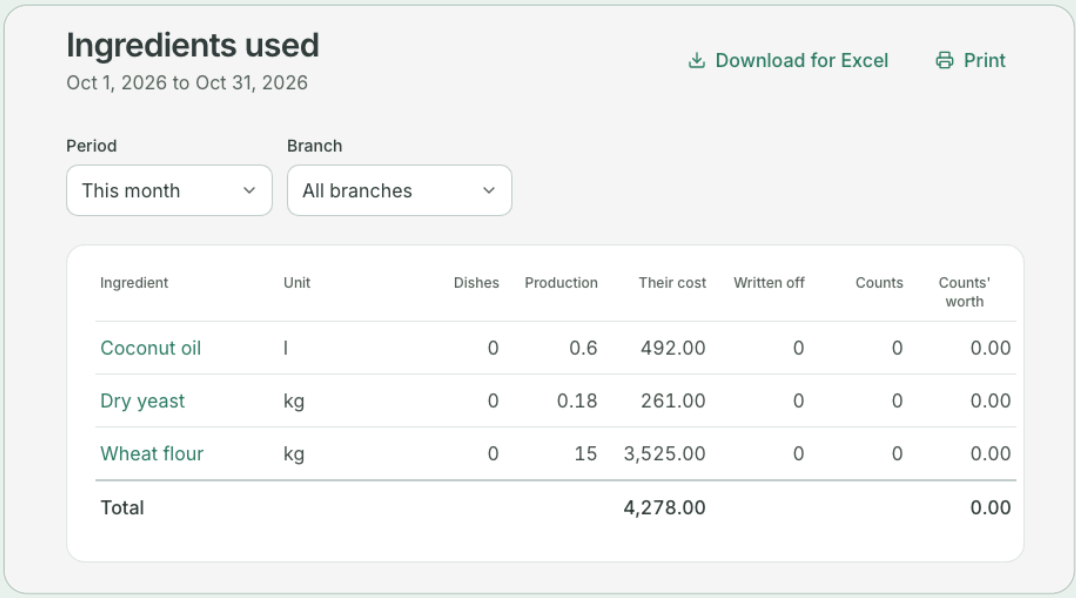

If a till goes quiet with a shift open, the branch's managers get an email.

☆ WHAT IT MEANS FOR YOU

Fewer losses you can't explain, and peace of mind when you are not on the floor.

Stock and suppliers, done as you bake and sell

Stock goes down by itself as you bake and sell. Buying, receiving and counting all live in the back office, for every branch.

Ingredients used: what production took, what was written off, and what counts found.

- **What to order**
  Set a reorder level for each item. Coredile lists what is at or below it, grouped by supplier, with how much to order.
- **Receive what really came**
  Goods are received at the delivery note's price and discount, with VAT as the note shows it.
- **Stock counts**
  Several people count at once by searching or scanning, without seeing what the system expects. Coredile shows what went missing, in rupees.
- **Transfers between branches**
  Stock sent to another branch shows as on its way to both, and the other branch receives what actually came.
- **Orders emailed to suppliers**
  Send a purchase order straight from Coredile. Big orders can wait for an owner's approval first.
- **Batch and expiry**
  Keep any item by batch and expiry date. Sales take the batch that expires first, without anyone choosing.
- **Write-offs with a reason**
  Damaged, expired, spoiled or used in the shop, with a photo or a note kept with it.

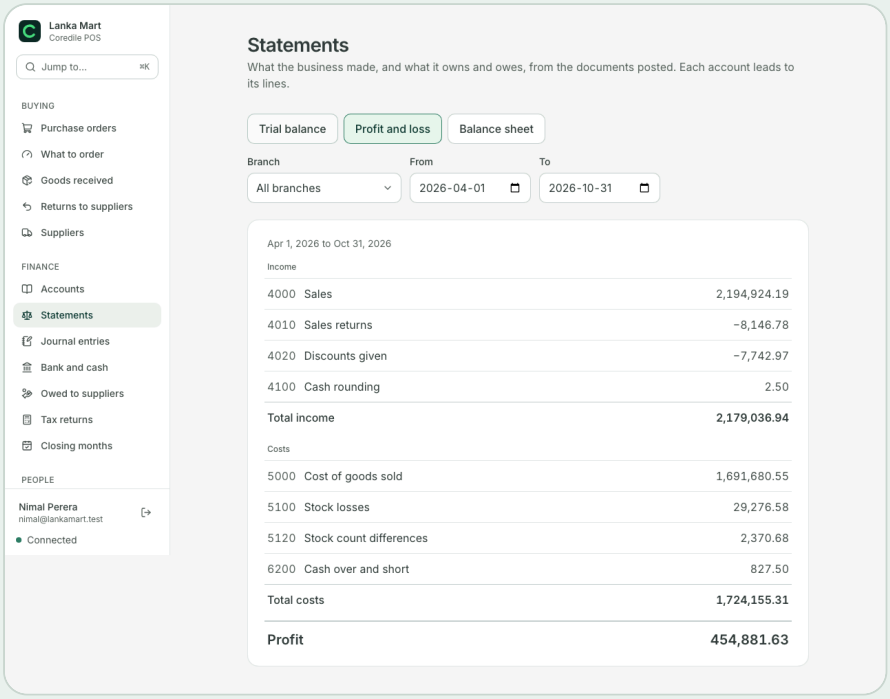

☆ WHAT IT MEANS FOR YOU

No more Sunday counts by hand, and no surprise when something runs out.

ACCOUNTS AND TAX

Clean books for your accountant

Every bill, delivery, refund and write-off writes itself into the accounts as it happens. There is nothing to type up at the end of the month.

Statements: trial balance, profit and loss and balance sheet, for the business or one branch.

- **Profit and loss**
  For any month, for the whole business or one branch, with the balance sheet and trial balance beside it.
- **What customers owe you**
  Account customers, their limits and what is still to pay, oldest first.
- **VAT and SSCL figures**
  The figures for the VAT return month by month, and SSCL by quarter, each leading to the bills behind it.
- **Excel and print**
  Every report downloads for Excel and prints.
- **What you owe suppliers**
  Supplier invoices, credit notes and payments, with what is still to pay.
- **Bank and cash**
  Takings banked, and card and QR money on its way to the bank, less the bank's fee.
- **Months that stay closed**
  Your accountant closes each month once it is done, so nothing changes afterwards.

☆ WHAT IT MEANS FOR YOU

No bag of papers for the accountant. The figures come straight from the system, already in order.

FOR THE OWNER

See where the flour goes

The back office opens in any browser, on your phone too. Every figure leads to what is behind it.

Production
Planned, good and lost by product and day, with what one good item cost.

Recipe costs
Every product's cost today against its price, the highest food cost first.

Ingredients used
What the bakes used, what was written off, and what the counts found missing.

Today against last week
Sales hour by hour, against the same day last week, and the month against its target.

Shops compared
Sales, margin, losses, cash short or over and days of stock, side by side.

The morning email
At 7 a.m., yesterday's sales, shop by shop.

☆ WHAT IT MEANS FOR YOU

You see where every kilo of flour went, without being in the bakery at 4 a.m.

Deals and points that run themselves

An add-on for Rs 2,000 a month per branch, only if you want it. You set a deal up once and every till applies it by itself, offline too.

Offers of every kind

A price off, 3 for a price, buy 2 get 1 free, a set of items at a price, or money off a bill over an amount.

When and where

For some days, some hours or some branches, or for members only. Evening deals run themselves.

The best deal, picked for the customer

When several offers could apply, the till picks the best one, and the receipt says what was saved.

Members and points

Members are found at the till by card, phone or name, earn points as they buy and spend them as payment.

Gift cards and store credit

Gift cards are sold, loaded and spent at the till. A return can go back as store credit.

Reports

What each offer gave away, what members bought, and what is owed to customers in points and cards.

☆ WHAT IT MEANS FOR YOU

Customers come back, and every deal is applied the same way at every till, with nothing written down.

One day at a bakery

18:00 — **Plan tomorrow**

220 sandwich breads and 96 tea buns. Coredile warns the flour is short, so it's ordered in time.

04:00 — **The bake starts**

The bakers weigh out from the printed sheet and tick each line.

06:30 — **Out of the oven**

57 of 60 loaves came out good. The flour leaves the stock and the bread goes on the shelf at Rs 75.05 a loaf.

07:00 — **The owner's email**

Yesterday's sales, shop by shop.

07:15 — **Trays to the shops**

Each shop receives what actually arrived.

08:00 — **The morning rush**

Quick buttons and short queues, even if the internet drops.

18:00 — **The evening deal**

Buns at a lower price after six, applied by every till.

20:00 — **Closing**

What didn't sell is written off with a reason, and the cash count shows short or over.

PRICE

One price per branch

Bakery

Rs 6,500

a month per branch, with two tills

- ✓ Recipes and food cost
- ✓ Losses and use-by dates
- ✓ Customers on account
- ✓ Accounts, VAT and SSCL figures
- ✓ Bake plans and printed sheets
- ✓ Quick counter billing
- ✓ Stock, suppliers and transfers
- ✓ Every report and the morning email

Extra till
Rs 1,500 a month

Offers and Loyalty, if you want it
Rs 2,000 a month per branch

Pay yearly
12 months for the price of 10

Setup and training
Agreed in writing before we start

No charge per cashier, per product or per bill. Updates and help from our team are included. Prices are in Sri Lankan rupees; VAT is added if it applies.

GETTING STARTED

Simple to start

You bring

- ✓ A Windows PC or laptop for each till
- ✓ A receipt printer at each till
- ✓ Any printer for the bake sheet
- ✓ A cash drawer, if you want one

We do

- ✓ Load your products and recipes, from Excel or your recipe book
- ✓ Set up your bakery and your shops
- ✓ Train your cashiers and bakers
- ✓ Answer when you call us for help

1

Free demo

We'll show you Coredile with breads and cakes like yours.

2

Agree the price

You get the setup and training price in writing.

3

We set it up

We load your products and recipes, set up your tills and train your staff.

4

Start selling

Pay by the month or by the year. No long contract.

Questions owners ask

Can bakers see our recipes?

No. A baker can record what came out of the oven without opening the recipes. Only the people you allow can see or change them.

What does a burnt tray cost us?

The production report shows it: what was planned, what came out good and what was lost, in loaves and in rupees.

Do we need the internet to sell?

No. Each till keeps everything it needs and sells for up to 3 days without internet. Bills go up by themselves when it's back. The internet is needed for the back office and the reports.

Can we bring in our product list?

Yes. We bring your products, and their stock if you have it, in from an Excel sheet in one go. Coredile checks every row first, and brings in all of it or none of it.

Can we have more than one shop?

Yes. You pay per branch. Each branch has its own tills, stock and prices if you want them, and the owner sees all of them together.

Is our data safe?

Your data is backed up every day, and no other business can ever see it.

What language are the screens in?

English today, with big buttons and plain words. The system is built so that Sinhala and Tamil can be added later.

How do we pay?

By the month, or by the year with 2 months free. Each invoice is emailed to you 10 days before it's due, and the tills start selling once the first invoice is paid. There is no long contract.

Do updates cost extra?

No. The tills update themselves when a manager allows it, never in the middle of an open shift.
