COREDILE
BUILD. RUN. EVOLVE.

PRODUCT GUIDE

For restaurants

Run the whole restaurant from one system.

Coredile POS takes the order at the table, sends it to the kitchen, splits the bill and works out what every plate cost you. It keeps going when the internet drops, and tells the owner how the night went by 7 the next morning.

3 days
of service with no internet

Six reasons restaurants choose Coredile

Waiters order at the table

On their own phones, paired once. The kitchen has the order a second later.

The kitchen never loses a ticket

Each station gets only its own dishes, printed or on a screen, oldest first.

Know your food cost

Every plate takes its ingredients off the stock at what you paid for them.

No internet? Keep serving

One till holds the open orders. Phones, screens and printers reach it over your own network.

Nothing disappears quietly

A dish the kitchen already has can only be cancelled by a manager, with a reason.

The owner sees it all

What's open in every branch right now, and a morning email with guests and spend per guest.

Price and getting started	16	Questions	17

ON THE FLOOR

Every table at a glance

In a restaurant the till opens on the table plan. You set up your areas and tables once, and the tills, the waiters' phones and the kitchen all see the same floor.

The table plan on the till. Colours and words show what each table needs.

- **Areas and tables**
  Indoor, garden, upstairs: each area laid out on a simple grid, with the seats at each table.
- **Open a table in two taps**
  Choose the table, say how many guests, and start adding dishes.
- **Takeaway and delivery**
  Orders by name instead of a table, with your own delivery fee as a line on the bill.
- **Live table states**
  Free, open, food ready or bill printed, with the guests, the time and the bill so far.
- **Move and merge**
  Move a table to another one, or merge two tables into one bill.
- **Keyboard shortcuts**
  F2 adds dishes, F12 sends to the kitchen, F7 starts a takeaway and F8 a delivery.

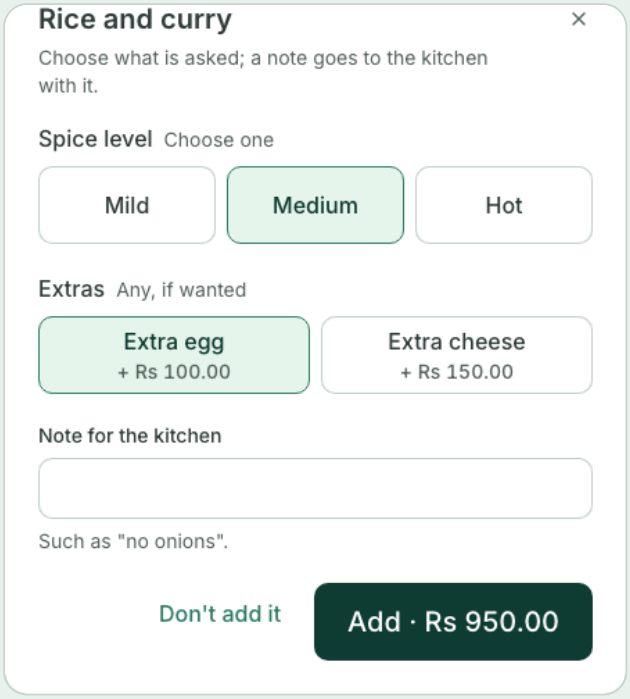

☆ WHAT IT MEANS FOR YOU

Nobody walks round asking which table is waiting. The plan shows it, and the floor and the kitchen see the same thing.

TAKING ORDERS

Orders taken right the first time

Dishes are added at the till or on a waiter's phone, with the choices the guest asked for and a note for the kitchen. Each round goes to the kitchen at once.

Choices and a kitchen note, asked as the dish is added.

- **Choices on a dish**
  Spice level, size or extras. A choice can be required or optional, free or priced, like an extra egg for Rs 100.
- **Notes for the kitchen**
  "No onions" or "less spicy", written on the dish and printed on the ticket.
- **Search, scan or tap**
  Quick buttons in eight colours with small pictures, grouped by category.
- **Priced extras counted properly**
  An extra is sold as its own line, with its own price, tax and place in the sales figures.
- **Rounds**
  Starters now, mains later. Each round is sent once, so nothing is cooked twice.
- **The service charge**
  A line of its own for the kinds of order you choose, worked out before or after discounts, as you prefer.

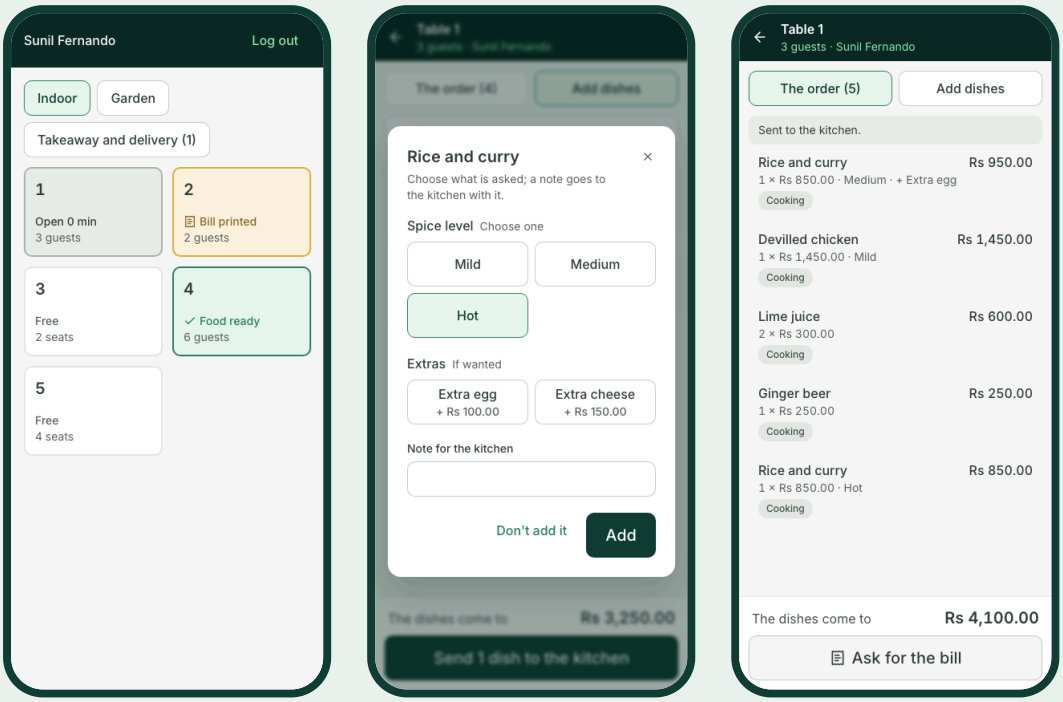

☆ WHAT IT MEANS FOR YOU

Fewer mistakes between the table and the kitchen, and every extra is charged for.

WAITERS' PHONES

Waiters order on their own phones

There is no app to install. A manager pairs each phone once at a till, with a six-digit code and a QR code, and each waiter logs in with their own PIN.

Tables, choices, and the order sent to the kitchen, on a waiter's phone.

✓ Any phone or tablet

Waiters use the browser on the phone they already carry.

✓ Order with choices and notes

The same dishes, choices and notes as the till.

✓ Ask for the bill

From the phone. The front-counter till prints it.

✓ The whole floor in their hand

Tables, takeaways and deliveries, with what is cooking and what is ready.

✓ See when food is ready

Each dish shows as cooking or ready as soon as the cook marks it done.

✓ A lost phone

A manager unpairs it from the till in a moment.

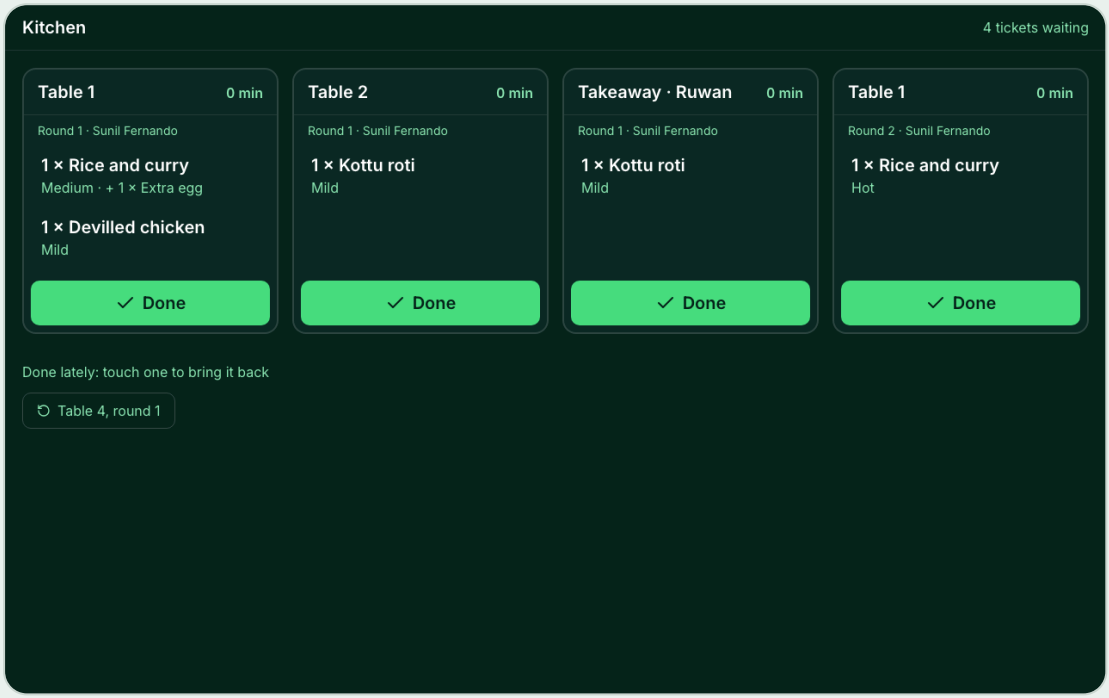

☆ WHAT IT MEANS FOR YOU

Waiters stay at the tables instead of queuing at the counter, and the kitchen gets the order while the guest is still talking.

IN THE KITCHEN

The kitchen sees every order, in order

You set up your stations, such as the kitchen and the bar, and say which categories each one makes. Each station chooses a printer, a screen, or both.

The kitchen screen: tickets oldest first, each with its round and waiter.

- **The right dishes to the right place**
  Kottu to the kitchen, drinks to the bar, each with its own ticket.
- **A kitchen screen**
  Any screen with a browser. Tickets show oldest first, amber after 10 minutes and red after 20.
- **Cancelled dishes**
  The kitchen gets a ticket saying so, only at the station that was making it.
- **Printed tickets**
  At each station's network printer. A ticket that fails is tried again every 20 seconds, and the till shows it until it prints.
- **One touch to mark done**
  The cook marks a dish or a whole ticket done; one done by mistake can be brought back.
- **Kitchen times**
  A report shows how long each station took, by hour of the day.

☆ WHAT IT MEANS FOR YOU

No lost paper tickets and no shouting across the pass. The cooks see what to make next, and the owner sees where the delays are.

PAYING

Split the bill any way they ask

When the table asks for the bill it prints with the service charge as a line of its own, and the till does the sums for any split.

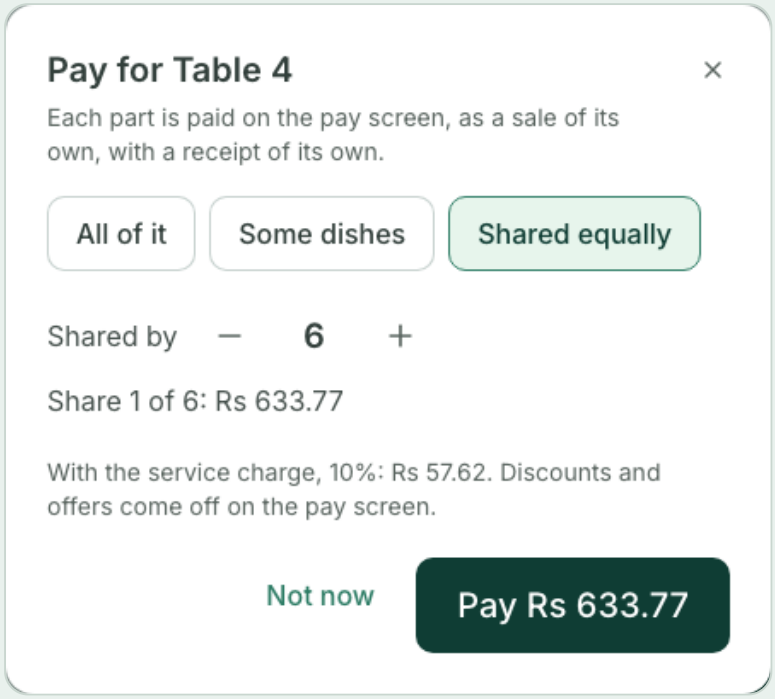

Table 4 shared equally by six guests, service charge included.

- **All of it**
  One bill for the whole table.
- **Shared equally**
  Between any number of guests. The shares always add up to the bill.
- **No double payments**
  A part being paid is held for that till, so two tills can never take money for the same dishes.
- **Some dishes**
  Each guest pays for what they had.
- **Every way of paying**
  Cash, card, bank transfer or QR, and points or gift cards with Offers and Loyalty.
- **A free table**
  When the last part is paid, the table is free again on every screen.

☆ WHAT IT MEANS FOR YOU

No calculator at the end of the meal, and no argument about who had what.

WHEN THE INTERNET DROPS

No internet? Service carries on.

One till in the restaurant, usually the front counter, holds every open order. The other tills, the waiters' phones, the kitchen screens and the printers reach it over your own network, so none of them needs the internet.

KEEPS WORKING WITHOUT INTERNET

- ✓ Taking orders
- ✓ Waiters' phones
- ✓ Kitchen tickets
- ✓ Kitchen screens
- ✓ Printing bills
- ✓ Split bills
- ✓ Taking payments
- ✓ Cash-up

Tills, phones, screens and printers talk over your own Wi-Fi and cables.

- ✓ **Orders, kitchen and bills keep working**
  For up to 3 days without internet.
- ✓ **If the front-counter till breaks**
  A manager makes another till take over, from its own copy of the open orders.
- ✓ **Logins and PINs work offline**
  Checked on the till itself.
- ✓ **Nothing is lost**
  Every bill goes up by itself, in order, when the internet is back.
- ✓ **Every till keeps a copy**
  A till that can't reach the others still sells at the counter, and says so plainly.

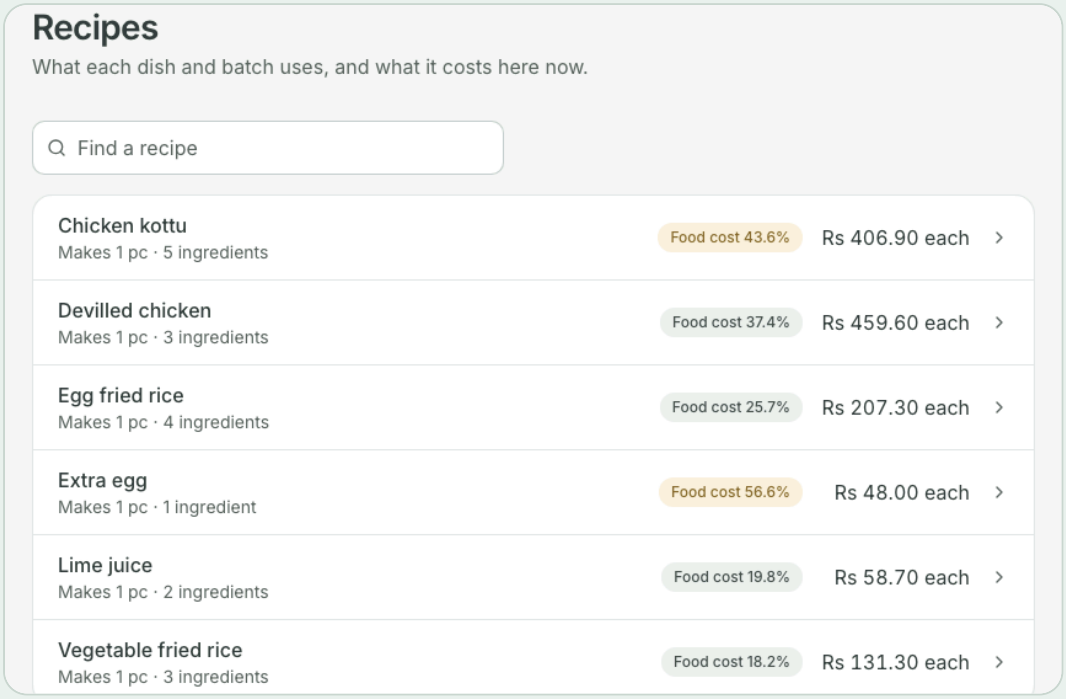

☆ WHAT IT MEANS FOR YOU

A power cut or a dead router on a busy night stops being a crisis. Guests never notice.

RECIPES

Know what every plate costs you

Recipes come with the Restaurant plan. Tell Coredile what goes into a dish once, and every plate sold takes its ingredients off the stock at what you paid for them.

Every recipe with its food cost and what one costs today.

- **Recipes in any unit**
  Grams, kilos, millilitres or pieces. Coredile converts them for you.
- **Choices that change ingredients**
  An extra egg takes an egg; fish instead of chicken takes fish.
- **Recipes kept in versions**
  Change a recipe from a day, and earlier sales keep the cost they had.
- **Ingredients used against counts**
  What the recipes used beside what the count found missing.
- **Food cost on every dish**
  What one plate costs against its price before VAT. Anything at 40% or more is marked.
- **Batch cooking**
  A pot of curry made in the morning and served by the portion.
- **Dishes still without a recipe**
  Listed with how many have sold, so you know what to add next.

☆ WHAT IT MEANS FOR YOU

When chicken goes up, you see it in your profit that week, not at the end of the year.

CONTROL AND SECURITY

Nothing happens without you knowing

Coredile is built so the owner always knows who did what, even on the days you are not there.

Cancelled dishes need a reason

Once the kitchen has a dish, only a manager can cancel it, and a reason is chosen. A report lists every one, with who and why.

A manager's PIN where it matters

Big discounts and refunds need a manager's PIN at the till, even with the internet down.

Approvals by value

Refunds, write-offs, stock corrections, supplier payments and orders over an amount you set wait for the right person.

Every action recorded

Every refund, price change and drawer opening is saved with who did it and when.

A blind cash-up

At closing the cashier counts the drawer note by note without seeing what it should hold. A manager sees how the count compares.

Each person sees their own job

Cashiers, managers, accountants and owners each get only the screens and permissions their work needs.

Tills that are watched

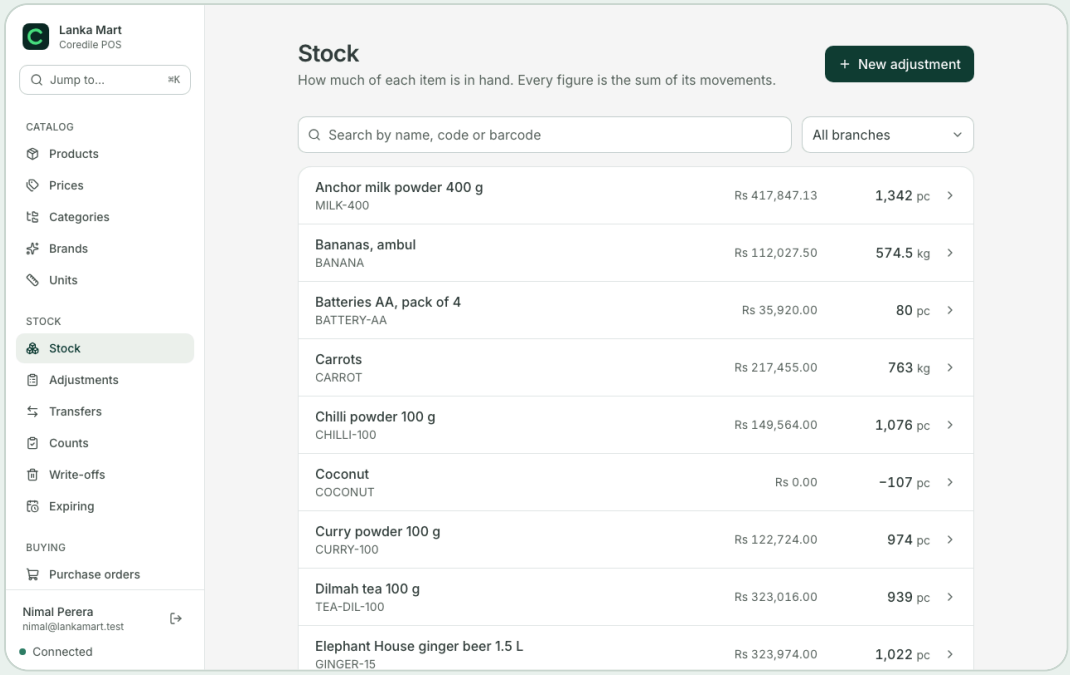

If a till goes quiet with a shift open, the branch's managers get an email.

☆ WHAT IT MEANS FOR YOU

Fewer losses you can't explain, and peace of mind when you are not on the floor.

Stock and suppliers, done as you sell

Stock goes down by itself as you sell. Buying, receiving and counting all live in the back office, for every branch.

Stock in hand for every item, by branch and location.

What to order

Set a reorder level for each item. Coredile lists what is at or below it, grouped by supplier, with how much to order.

Receive what really came

Goods are received at the delivery note's price and discount, with VAT as the note shows it.

Stock counts

Several people count at once by searching or scanning, without seeing what the system expects. Coredile shows what went missing, in rupees.

Transfers between branches

Stock sent to another branch shows as on its way to both, and the other branch receives what actually came.

Orders emailed to suppliers

Send a purchase order straight from Coredile. Big orders can wait for an owner's approval first.

Batch and expiry

Keep any item by batch and expiry date. Sales take the batch that expires first, without anyone choosing.

Write-offs with a reason

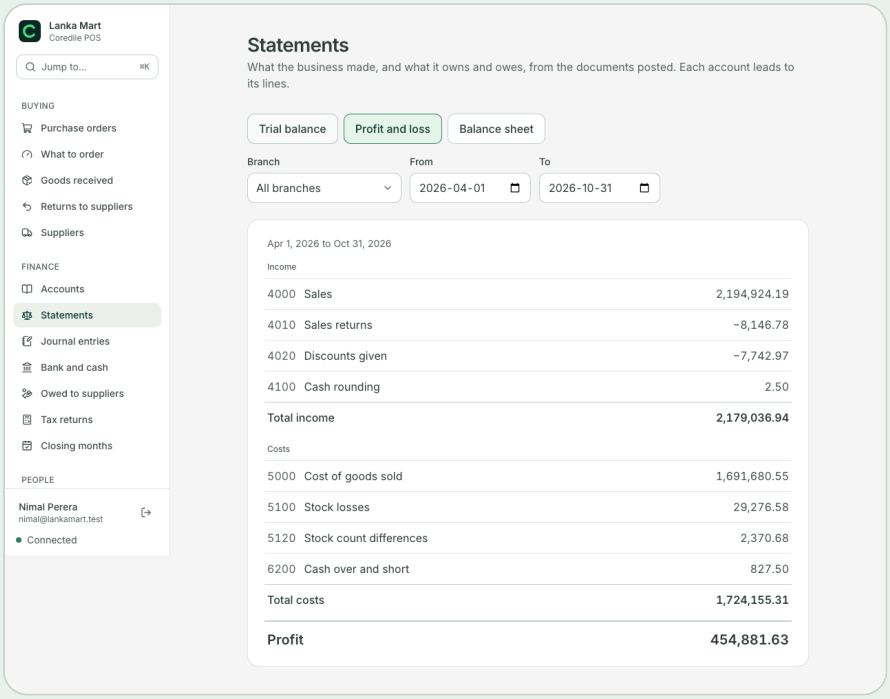

Damaged, expired, spoiled or used in the shop, with a photo or a note kept with it.

☆ WHAT IT MEANS FOR YOU

No more Sunday counts by hand, and no surprise when something runs out.

Clean books for your accountant

Every bill, delivery, refund and write-off writes itself into the accounts as it happens. There is nothing to type up at the end of the month.

Statements: trial balance, profit and loss and balance sheet, for the business or one branch.

- **Profit and loss**
  For any month, for the whole business or one branch, with the balance sheet and trial balance beside it.
- **Bank and cash**
  Takings banked, and card and QR money on its way to the bank, less the bank's fee.
- **Months that stay closed**
  Your accountant closes each month once it is done, so nothing changes afterwards.
- **What you owe suppliers**
  Supplier invoices, credit notes and payments, with what is still to pay.
- **VAT and SSCL figures**
  The figures for the VAT return month by month, and SSCL by quarter, each leading to the bills behind it.
- **Excel and print**
  Every report downloads for Excel and prints.

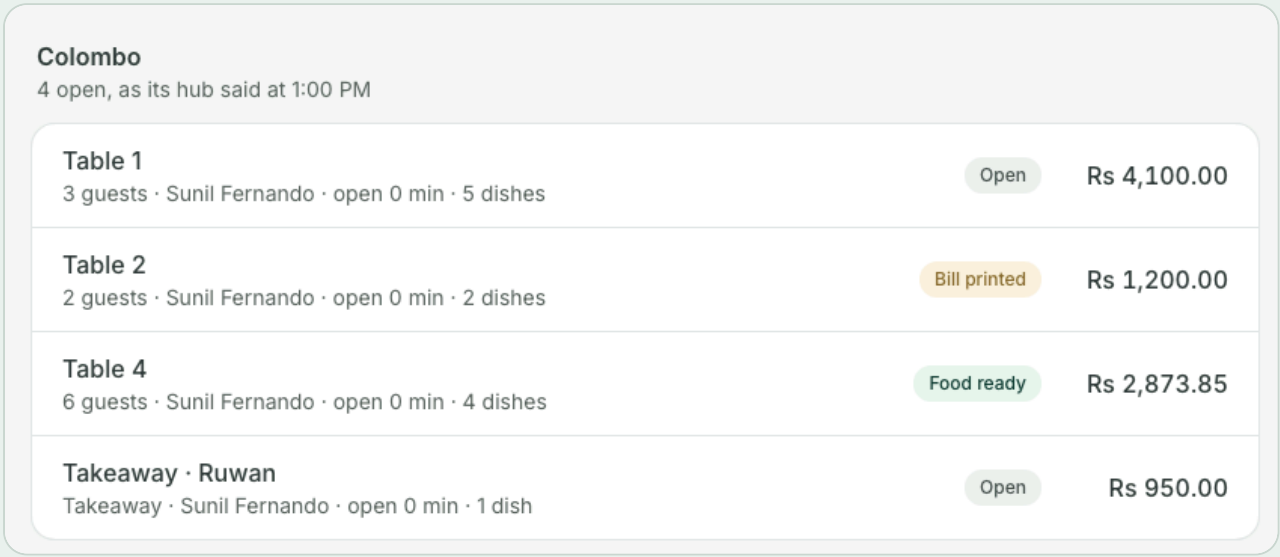

☆ WHAT IT MEANS FOR YOU

No bag of papers for the accountant. The figures come straight from the system, already in order.

FOR THE OWNER

See every restaurant from your phone

The back office opens in any browser, on your phone too. Every figure leads to what is behind it.

Open now: what each restaurant has on its tables at this moment.

- **What's open right now**
  Every open table in every branch, with its guests and bill so far, within 20 seconds of a change.
- **Restaurant sales**
  By table, area, waiter and kind of order, with guests, service charge and spend per guest.
- **Cancellations and kitchen times**
  Every dish cancelled after the kitchen had it, and how long each station takes.
- **Today against last week**
  Sales hour by hour, against the same day last week, and the month against its target.
- **Branches compared**
  Sales, margin, target, cash short or over and days of stock, side by side.
- **The morning email**
  At 7 a.m.: yesterday's sales, guests served and spend per guest.

☆ WHAT IT MEANS FOR YOU

You know how the night went without phoning anyone.

Deals and points that run themselves

An add-on for Rs 2,000 a month per branch, only if you want it. You set a deal up once and every till applies it by itself, offline too.

Offers of every kind

A price off, 3 for a price, buy 2 get 1 free, a set of items at a price, or money off a bill over an amount.

When and where

For some days, some hours or some branches, or for members only. A happy hour runs itself.

The best deal, picked for the customer

When several offers could apply, the till picks the best one, and the receipt says what was saved.

Members and points

Members are found at the till by card, phone or name, earn points as they buy and spend them as payment.

Gift cards and store credit

Gift cards are sold, loaded and spent at the till. A return can go back as store credit.

Reports

What each offer gave away, what members bought, and what is owed to customers in points and cards.

☆ WHAT IT MEANS FOR YOU

Customers come back, and every deal is applied the same way at every till, with nothing written down.

One day at a restaurant

09:30

The delivery arrives

Chicken and rice are received at the price on the delivery note, and the stock goes up.

11:45

Lunch opens

Waiters log in on their phones with their PINs. The plan shows every table free.

12:20

Table 4 orders

Rice and curry, medium, with an extra egg. The kitchen ticket prints and the drinks go to the bar.

12:38

Food ready

The cook taps Done. The waiter's phone and the table plan both show it.

13:50

Six guests split the bill

Shared equally. Each pays at the till and gets a receipt of their own.

15:00

The internet drops

Nobody notices. Orders, tickets and bills carry on.

22:30

Closing

The cashier counts the drawer, and the till shows if anything is short or over.

07:00

The next morning

The owner's email: yesterday's sales, guests served and spend per guest.

PRICE

One price per branch

Restaurant

Rs 8,500

a month per branch, with two tills

- ✓ Tables, takeaway and delivery
- ✓ Kitchen tickets and screens
- ✓ Recipes and food cost
- ✓ Accounts, VAT and SSCL figures
- ✓ Waiters' phones
- ✓ Split bills and the service charge
- ✓ Stock, suppliers and transfers
- ✓ Every report and the morning email

Extra till
Rs 1,500 a month

Offers and Loyalty, if you want it
Rs 2,000 a month per branch

Pay yearly
12 months for the price of 10

Setup and training
Agreed in writing before we start

No charge per waiter, per dish or per bill. Updates and help from our team are included. Prices are in Sri Lankan rupees; VAT is added if it applies.

GETTING STARTED

Simple to start

You bring

- ✓ A Windows PC or laptop for each till
- ✓ A receipt printer at each till
- ✓ A network printer in the kitchen and the bar, or any screen with a browser
- ✓ Good Wi-Fi. Waiters use their own phones.

We do

- ✓ Load your menu and recipes, from Excel or even a printed menu
- ✓ Set up your tables, kitchen, bar and tills
- ✓ Train your cashiers, waiters and cooks
- ✓ Answer when you call us for help

1

Free demo

We'll show you Coredile with dishes and tables like yours.

2

Agree the price

You get the setup and training price in writing.

3

We set it up

We load your menu, set up your tables and kitchen, and train your staff.

4

Start serving

Pay by the month or by the year. No long contract.

Questions owners ask

Do we need the internet to work?

No. One till holds the open orders, and the phones, kitchen screens and printers reach it over your own network. You can serve for up to 3 days without internet; everything goes up by itself when it's back.

Do waiters need to download an app?

No. They open a page in their phone's browser, paired once by a manager, and log in with their own PIN.

What happens if the main till breaks?

A manager makes another till take over. Every till keeps its own copy of the open orders, so nothing is lost.

Can the kitchen keep its printer?

Yes. Each station can print, use a screen, or both. Most kitchens start with a printer, as they work today.

Can we run more than one branch?

Yes. Each branch has its own floor, kitchen and tills, and the owner sees every branch together.

Is our data safe?

Your data is backed up every day, and no other business can ever see it.

What language are the screens in?

English today, with big buttons and plain words. The system is built so that Sinhala and Tamil can be added later.

How do we pay?

By the month, or by the year with 2 months free. Each invoice is emailed 10 days before it's due, and the tills start selling once the first invoice is paid. There is no long contract.

Do updates cost extra?

No. Tills update themselves when a manager allows it, never while a shift or tables are open.
