COREDILE
BUILD. RUN. EVOLVE.

PRODUCT GUIDE

For shops and supermarkets

Sell faster, buy smarter, and trust your stock.

Coredile POS bills with barcodes and printed prices, keeps stock in every branch, orders from your suppliers and looks after customers who pay later. It keeps billing when the internet drops.

3 days
of billing with no internet

Rs 4,500
a month per branch, two tills included

0
charge per cashier, product or bill

7 a.m.
email with yesterday's figures

Six reasons shops choose Coredile

Fast billing
Barcodes, quick buttons, and selling by the piece or by the case.

The right printed price
When two printed prices are on the shelf, the till asks which one is on the pack.

Credit without the notebook
Limits, balances and payments for customers who pay later.

Order before it runs out
A list of what's low, by supplier, and orders emailed in a click.

Stock you can trust
Counts by scanning, and what went missing in rupees.

No internet? Keep billing
Each till sells on its own for up to 3 days.

AT THE COUNTER

Easy to learn, quick to use

Big buttons, clear prices, and the total always on the right. A new cashier learns the till in one shift.

Paid, with the change to give and a tax invoice one tap away.

- **Scan, search or tap**
  Barcodes, search by name or code, and quick buttons in eight colours with small pictures.
- **Every way of paying**
  Cash, card, bank transfer or QR, with the change worked out.
- **Returns**
  Against the receipt, with the money back or, with Offers and Loyalty, as store credit.
- **Shifts**
  Open with the cash in the drawer, record cash in and out, and count up blind at closing.
- **By the piece or by the case**
  Rs 450 a tin or Rs 10,500 a case of 24, from the same product.
- **Hold a bill**
  Put a bill aside when a customer forgets something, and serve the next one.
- **Tax invoices**
  For a business customer who asks, in one tap.

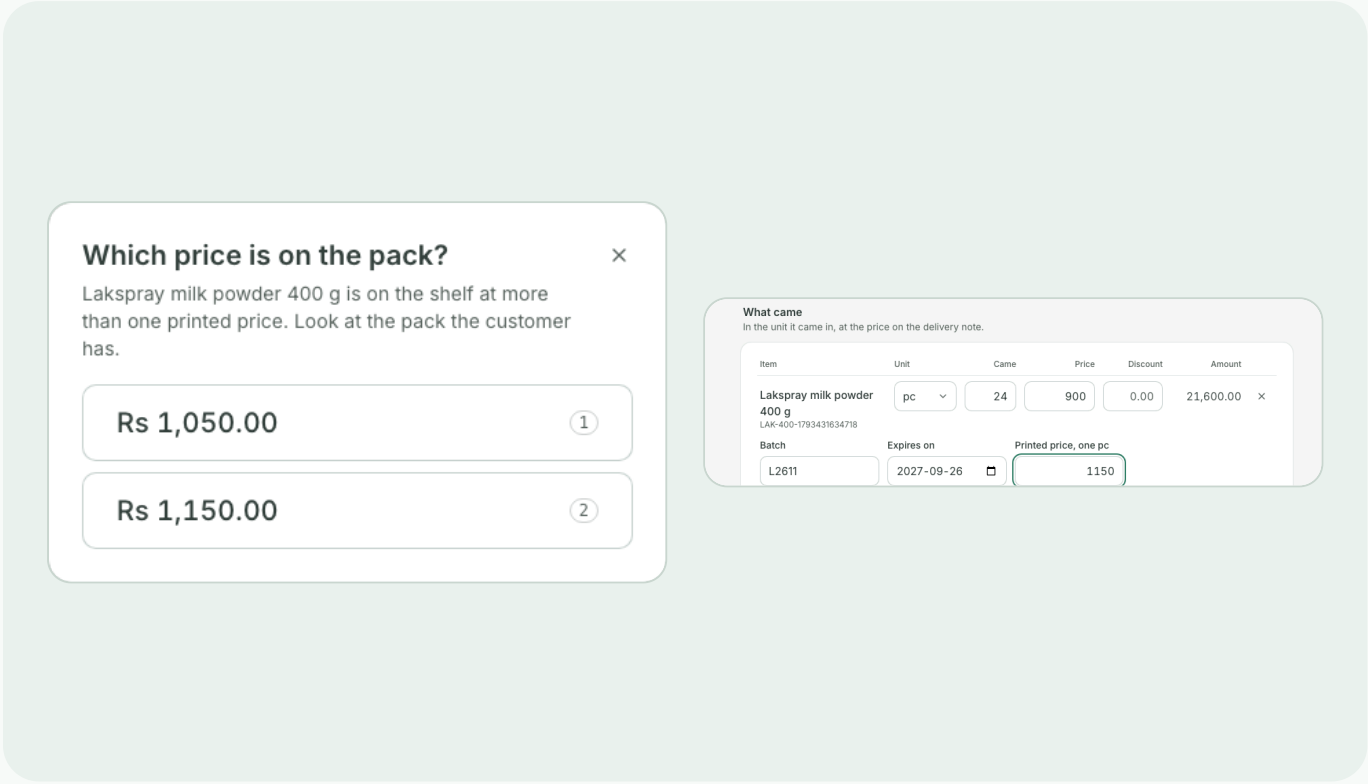

☆ WHAT IT MEANS FOR YOU

Shorter queues, fewer mistakes, and new staff selling on their first day.

PRINTED PRICES

The price on the pack, every time

When prices go up, old and new stock sit on the shelf with different printed prices. Coredile sells each pack at the price printed on it.

The till asking which printed price is on the pack, and the batch received with its printed price.

- **Printed price per batch**
  When goods arrive, you type in each batch's printed price with its expiry date.
- **One price, no question**
  With a single printed price on the shelf, the till asks nothing.
- **Oldest first**
  Sales take the batch that expires first, without anyone choosing.
- **The till asks**
  If there are two printed prices on the shelf, the cashier picks the one on the pack, and that batch is sold at that price.
- **Works offline**
  With the prices the till last heard of.

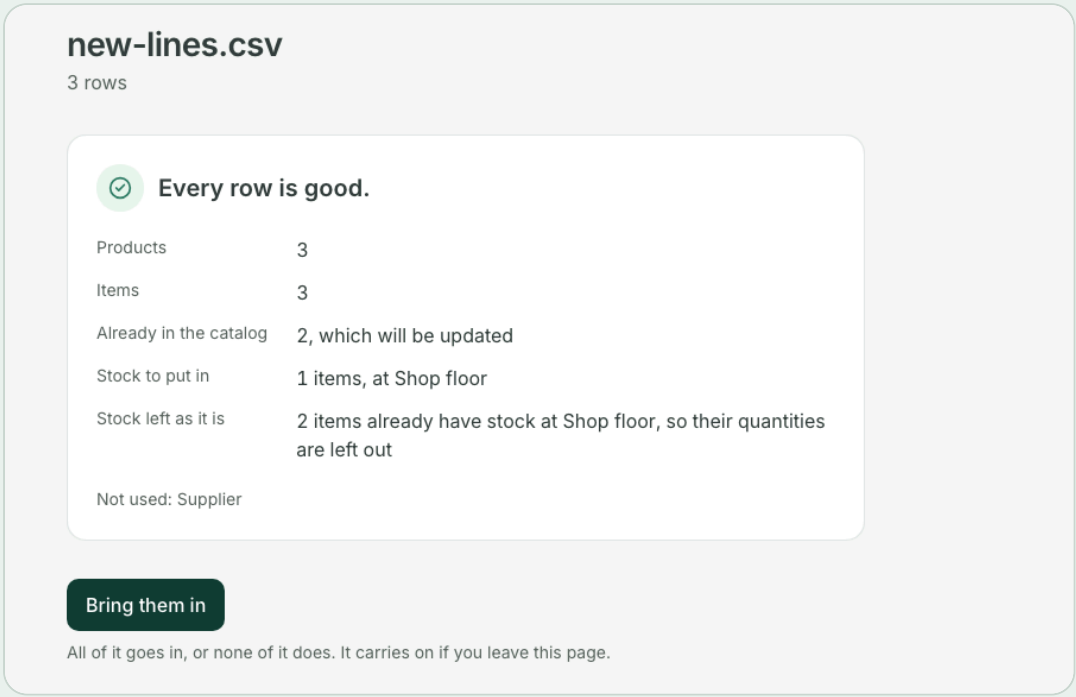

☆ WHAT IT MEANS FOR YOU

No overcharging and no undercharging. Customers pay what is printed, and you never lose the difference.

YOUR PRODUCTS

All your products, set up in an afternoon

Bring your product list in from Excel, and set up everything a shop needs: sizes, units, barcodes and prices for each branch.

An Excel sheet checked and ready to bring in.

- **Excel import**
  Products, and their stock if you have it, in one go. Every row is checked first, and it all goes in or none of it does.
- **Units**
  By the piece, the case or the kilo, each with its own price.
- **Categories, brands and your own fields**
  Add the details your business needs, such as fabric or shelf.
- **Prices for later**
  Set a new price from a day and time; every till switches by itself.
- **Sizes and colours**
  A shirt in three sizes and two colours is one product with six items, each with its own barcode.
- **Several barcodes**
  An item can have more than one barcode.
- **Prices per branch**
  One price list for the business, with a different price in a branch where you need it.

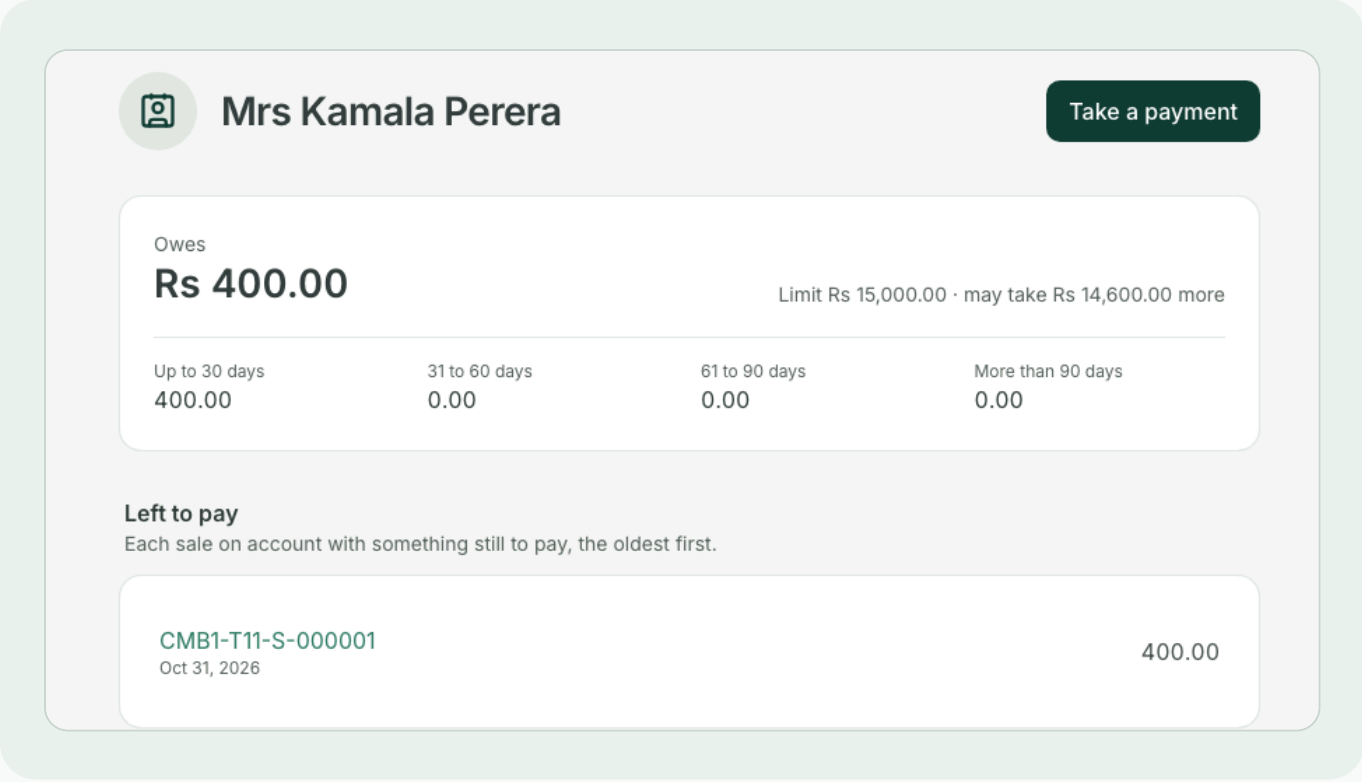

☆ WHAT IT MEANS FOR YOU

You start selling with your real product list in days, not weeks.

CUSTOMERS ON CREDIT

Sell on credit, without the notebook

Many shops have regulars who pay at the end of the month. Coredile keeps their accounts for you, at every till.

A customer's account: what they owe, their limit, and what is left to pay.

- ✓ **A credit limit for each customer**
  Set how much each customer may owe. Leave it empty for customers who don't buy on account.
- ✓ **Past the limit**
  Needs a manager's PIN. A sale another till let through is caught and held for a manager.
- ✓ **Payments and statements**
  Take a payment at the till with a receipt, or in the back office into the bank. Print or email a statement.
- ✓ **On account at the till**
  The cashier finds the customer and sees what they may still take, offline too.
- ✓ **Who owes what, and for how long**
  Up to 30 days, 60, 90 or more, with each unpaid sale.

☆ WHAT IT MEANS FOR YOU

No lost notebook pages and no forgotten debts. You know who owes you, and since when.

WHEN THE INTERNET DROPS

No internet? Keep billing.

Each till keeps its own copy of your products, prices, offers and staff, so it does not need the internet to sell. Power cuts and internet problems stop being a crisis.

KEEPS WORKING WITHOUT INTERNET

- ✓ Billing
- ✓ Printing bills
- ✓ Cash and card
- ✓ Returns
- ✓ Manager PINs
- ✓ Offers
- ✓ Cash-up

When the internet comes back, every bill goes up in the right order by itself.

- ✓ **Up to 3 days without internet**
  The till sells, prints bills and takes returns of its own receipts as normal.
- ✓ **Logins and PINs work offline**
  Cashiers log in and managers approve with their PINs, checked on the till itself.
- ✓ **Stock rules**
  Choose items that sell freely, up to a number while offline, or only with the internet.
- ✓ **You can see every till**
  The back office shows each till: online or not, when it was last heard from, and what it still has to send.
- ✓ **Nothing is lost**
  Every bill waits in order on the till and goes up by itself when the internet is back, never twice.
- ✓ **Credit limits known offline**
  The till knows what each account customer may still take.
- ✓ **Prices change on time**
  A new price set for a day and time switches on every till by its own clock, even offline.

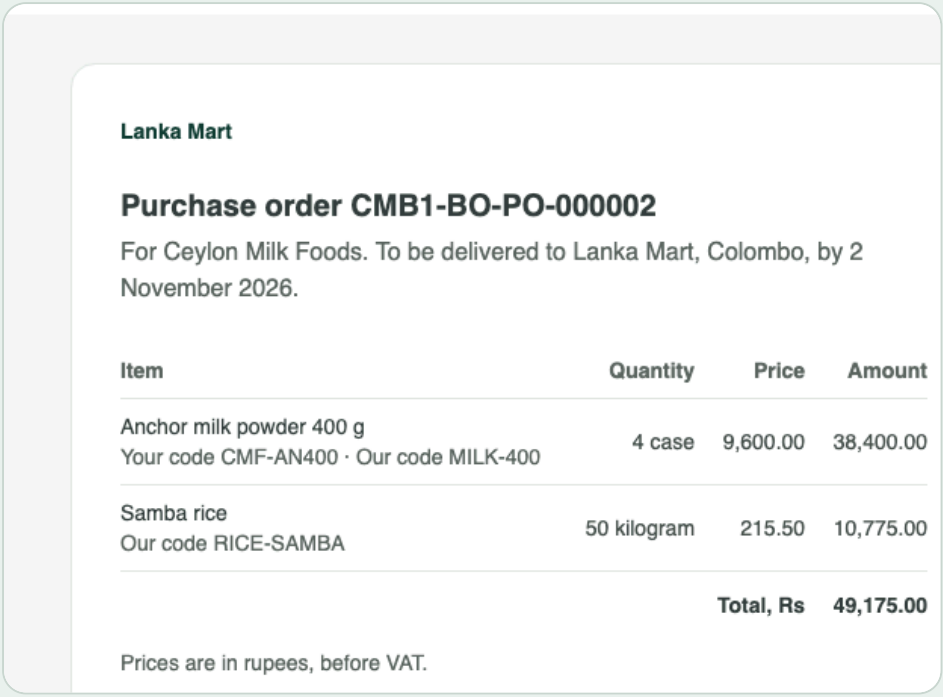

☆ WHAT IT MEANS FOR YOU

Your customers never notice the internet went down. You keep selling, and nothing needs fixing afterwards.

BUYING

Order from suppliers in minutes

From what's running low to what you owe, the whole buying side is in one place.

Lanka Mart

Purchase order CMB1-BO-PO-000002

For Ceylon Milk Foods. To be delivered to Lanka Mart, Colombo, by 2 November 2026.

Item	Quantity	Price	Amount
Anchor milk powder 400 g Your code CMF-AN400 · Our code MILK-400	4 case	9,600.00	38,400.00
Samba rice Our code RICE-SAMBA	50 kilogram	215.50	10,775.00
		Total, Rs	**49,175.00**

Prices are in rupees, before VAT.

A purchase order as the supplier receives it.

- ✓ **Your suppliers**
  Each with what they supply, their own codes and the last price you paid.
- ✓ **Orders by email**
  Sent straight to the supplier, and sent again if you change them.
- ✓ **Receive what really came**
  At the delivery note's price and discount, with batch, expiry and printed price.
- ✓ **Invoices and payments**
  Supplier invoices from goods received, and payments against the oldest first.
- ✓ **What to order**
  Set reorder levels; Coredile lists what's low, grouped by supplier, with how much to order.
- ✓ **Approvals for big orders**
  Orders over an amount wait for the owner's OK.
- ✓ **Returns to suppliers**
  Send back what's damaged or expired, from the batch you choose.

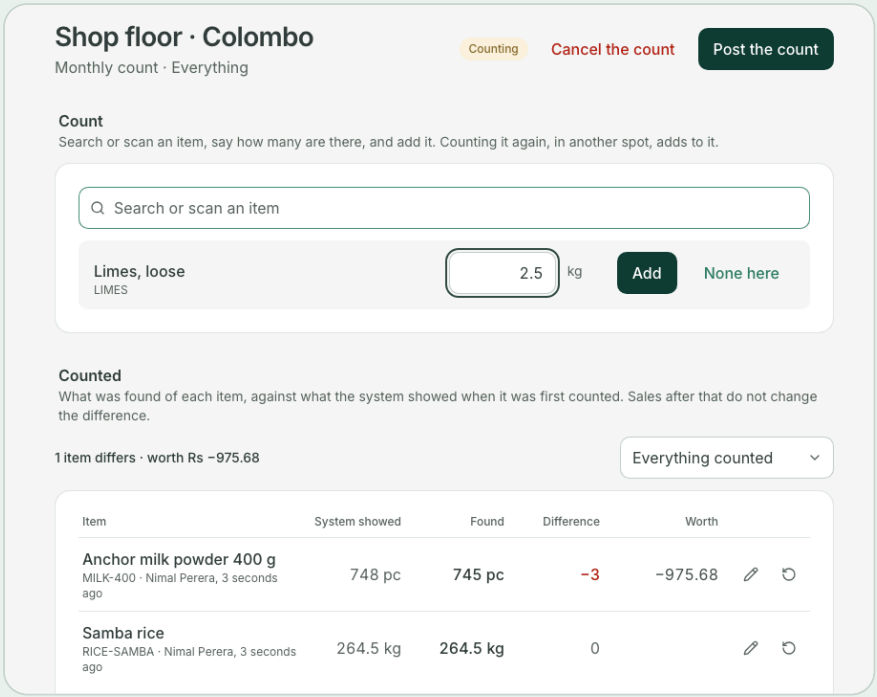

☆ WHAT IT MEANS FOR YOU

You order before shelves are empty, and pay only for what really arrived.

STOCK

Always know what's on the shelf

Every sale takes items off the stock by itself, in every branch, and every count shows you what went missing.

A count of the Colombo shop floor, with what went missing.

- **Stock counts by scanning**
  Several people count at once, searching or scanning, without seeing what the system expects.
- **Transfers between branches**
  On its way to both, and received as it really arrived.
- **Expiring soon**
  What has expired and what expires within 30 days, ready to write off.
- **What went missing, in rupees**
  The count shows each difference and what it is worth.
- **Write-offs with a reason**
  Damaged, expired, spoiled or used in the shop, with a photo if you want.
- **Stock value**
  What your stock was worth at the end of any day.

☆ WHAT IT MEANS FOR YOU

Stop the losses you couldn't see, and stop counting by hand on Sundays.

CONTROL AND SECURITY

Nothing happens without you knowing

Coredile is built so the owner always knows who did what, even on the days you are not there.

A manager's PIN where it matters

Big discounts and refunds need a manager's PIN at the till, even with the internet down.

Approvals by value

Refunds, write-offs, stock corrections, supplier payments and orders over an amount you set wait for the right person.

Every action recorded

Every refund, price change and drawer opening is saved with who did it and when.

A blind cash-up

At closing the cashier counts the drawer note by note without seeing what it should hold. A manager sees how the count compares.

Each person sees their own job

Cashiers, managers, accountants and owners each get only the screens and permissions their work needs.

Tills that are watched

If a till goes quiet with a shift open, the branch's managers get an email.

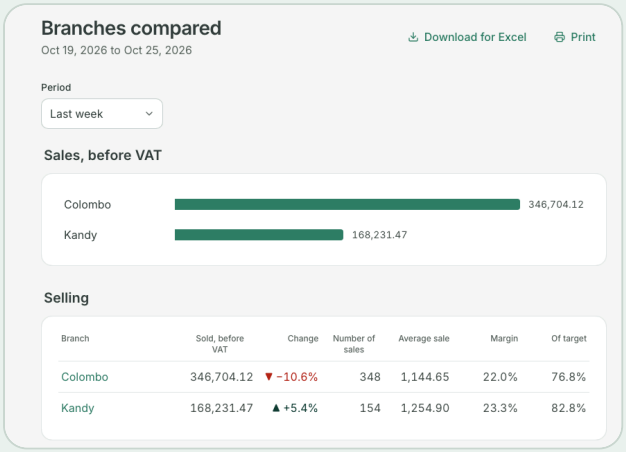

☆ WHAT IT MEANS FOR YOU

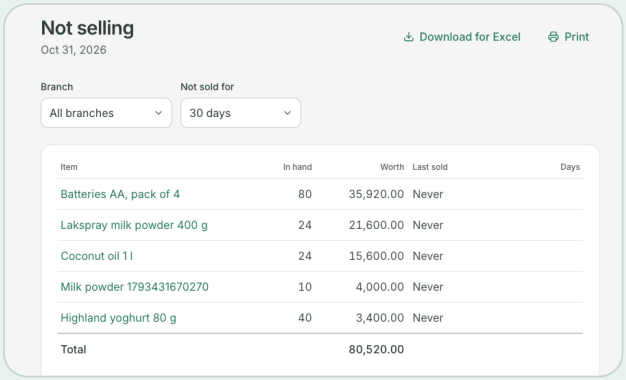

Fewer losses you can't explain, and peace of mind when you are not on the floor.

FOR THE OWNER

See every branch from your phone

The back office opens in any browser, on your phone too. Every figure leads to what is behind it, and every report downloads for Excel.

Branches compared, and the items that aren't selling.

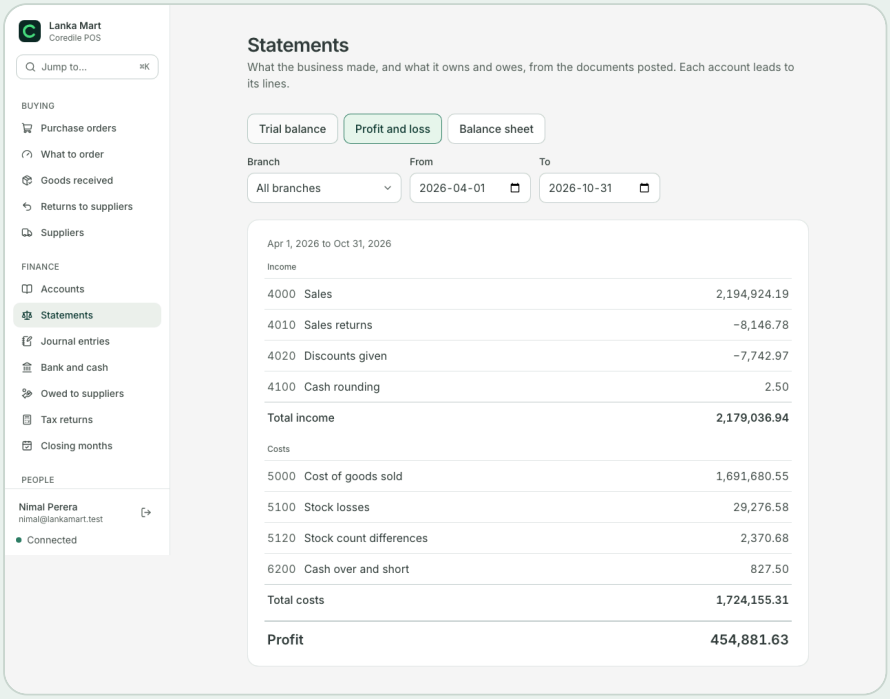

- **Today against last week**
  Sales hour by hour against the same day last week, and each branch against its monthly target.
- **What sold**
  By item, category or hour, with what you made on each at what you paid.
- **Cashiers**
  Each cashier's sales, discounts and refunds, with anything well above the others marked.
- **Branches compared**
  Sales, margin, returns, discounts, shrinkage, cash short or over and days of stock, side by side.
- **Not selling**
  Items that haven't sold for 30 days or more, and what they are worth.
- **The morning email**
  At 7 a.m., yesterday's figures, branch by branch.

☆ WHAT IT MEANS FOR YOU

You see what to buy more of, what to stop buying, and which branch needs your attention.

Clean books for your accountant

Every bill, delivery, refund and write-off writes itself into the accounts as it happens. There is nothing to type up at the end of the month.

Statements: trial balance, profit and loss and balance sheet, for the business or one branch.

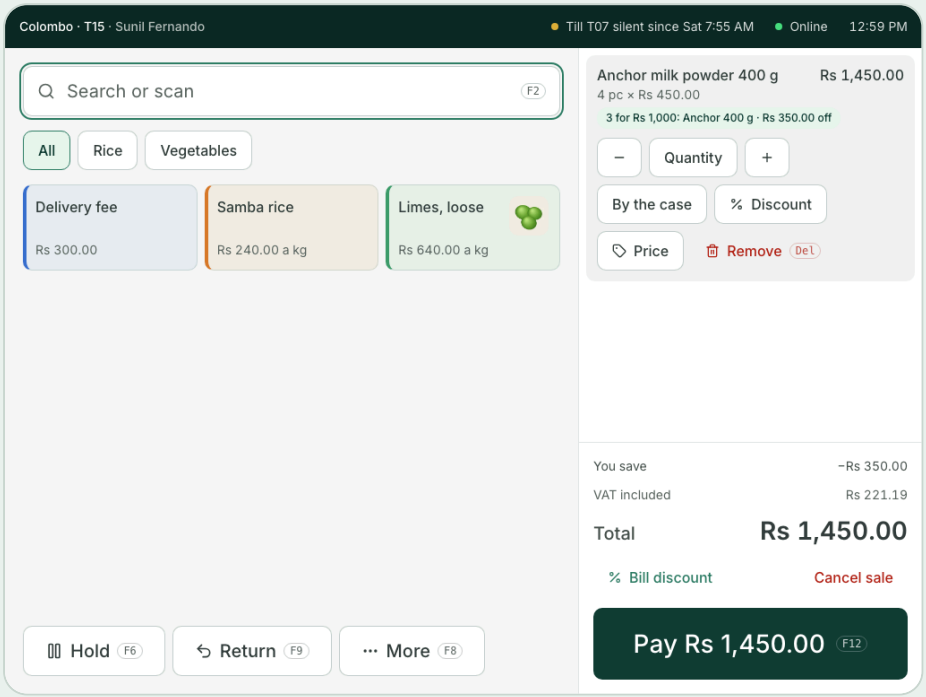

- **Profit and loss**
  For any month, for the whole business or one branch, with the balance sheet and trial balance beside it.
- **What customers owe you**
  Account customers, their limits and what is still to pay, oldest first.
- **VAT and SSCL figures**
  The figures for the VAT return month by month, and SSCL by quarter, each leading to the bills behind it.
- **Excel and print**
  Every report downloads for Excel and prints.
- **What you owe suppliers**
  Supplier invoices, credit notes and payments, with what is still to pay.
- **Bank and cash**
  Takings banked, and card and QR money on its way to the bank, less the bank's fee.
- **Months that stay closed**
  Your accountant closes each month once it is done, so nothing changes afterwards.

☆ WHAT IT MEANS FOR YOU

No bag of papers for the accountant. The figures come straight from the system, already in order.

Deals and points that run themselves

An add-on for Rs 2,000 a month per branch, only if you want it. You set a deal up once and every till applies it by itself, offline too.

"3 for Rs 1,000" applied by the till, with nobody pressing anything.

Offers of every kind

A price off, 3 for a price, buy 2 get 1 free, a set of items at a price, or money off a bill over an amount.

The best deal, picked for the customer

When several offers could apply, the till picks the best one, and the receipt says what was saved.

Gift cards and store credit

Gift cards are sold, loaded and spent at the till. A return can go back as store credit.

When and where

For some days, some hours or some branches, or for members only. Weekend deals start and stop by themselves.

Members and points

Members are found at the till by card, phone or name, earn points as they buy and spend them as payment.

Reports

What each offer gave away, what members bought, and what is owed to customers in points and cards.

☆ WHAT IT MEANS FOR YOU

Customers come back, and every deal is applied the same way at every till, with nothing written down.

One day at a shop

08:00 — **Open the shift**

The cashier counts the float into the till.

09:30 — **A delivery arrives**

Received at the note's price, with each batch's expiry date and printed price.

11:00 — **A regular pays later**

Mrs Perera's Rs 900 goes on her account, within her limit.

14:00 — **Time to reorder**

What to order shows milk powder is low, and the order is emailed to the supplier.

17:30 — **The evening rush**

Barcodes, offers that apply themselves, and no waiting if the internet drops.

21:00 — **Closing**

The drawer is counted note by note, and the till shows short or over.

07:00 — **The next morning**

The owner's email with yesterday's figures, branch by branch.

PRICE

One price per branch

Shop

Rs 4,500

a month per branch, with two tills

Rs 2,000 a month per branch

Pay yearly
12 months for the price of 10

Setup and training
Agreed in writing before we start

No charge per cashier, per product or per bill. Updates and help from our team are included. Prices are in Sri Lankan rupees; VAT is added if it applies.

GETTING STARTED

Simple to start

You bring

- ✓ A Windows PC or laptop for each till
- ✓ A receipt printer
- ✓ A barcode scanner and a cash drawer
- ✓ Your product list in Excel, if you have one

We do

- ✓ Bring in your products and stock from Excel
- ✓ Set up your tills, branches and prices
- ✓ Train your staff
- ✓ Answer when you call us for help

1

Free demo

We'll show you Coredile with products like yours.

2

Agree the price

You get the setup and training price in writing.

3

We set it up

We bring in your products, set up your tills and train your staff.

4

Start selling

Pay by the month or by the year. No long contract.

Questions owners ask

How does Coredile handle printed prices?

Each batch is received with its printed price. When two printed prices are on the shelf, the till asks the cashier which one is on the pack and sells that batch at that price.

Can customers buy on credit?

Yes. Each customer has a credit limit, the till knows what they may still take, even offline, and a manager's PIN is needed past the limit.

Do we need the internet to sell?

No. Each till keeps everything it needs and sells for up to 3 days without internet. Bills go up by themselves when it's back. The internet is needed for the back office and the reports.

Can we bring in our product list?

Yes. We bring your products, and their stock if you have it, in from an Excel sheet in one go. Coredile checks every row first, and brings in all of it or none of it.

Can we have more than one branch?

Yes. You pay per branch. Each branch has its own tills, stock and prices if you want them, and the owner sees all of them together.

Is our data safe?

Your data is backed up every day, and no other business can ever see it.

What language are the screens in?

English today, with big buttons and plain words. The system is built so that Sinhala and Tamil can be added later.

How do we pay?

By the month, or by the year with 2 months free. Each invoice is emailed to you 10 days before it's due, and the tills start selling once the first invoice is paid. There is no long contract.

Do updates cost extra?

No. The tills update themselves when a manager allows it, never in the middle of an open shift.
